### Case 2:23-cv-01049-JWH-KES Document 114-15 Filed 11/13/23 Page 3 of 19 Page ID #:1950

Entropic Communications, LLC v. Cox Communications, Inc., et al. Case 2:23-cv-01049-JWH-KES (C.D. Cal.)

#### U.S. Patent No. 9,825,826 (the "'826 Patent") Exemplary Infringement Chart

Cox operates and maintains a nationwide television and data network through which it sells, leases, and offers for sale products and services, including the Technicolor CGM4981, Technicolor CGM4331, Technicolor CGM4141, Technicolor CVA4004, ARRIS / Surfboard TM3402, ARRIS / Surfboard G36, ARRIS / Surfboard G54, ARRIS / Surfboard S33, ARRIS / Surfboard CM8200, ARRIS / Surfboard G34, ARRIS / Surfboard SB8200, ARRIS / Surfboard DG2460, ARRIS TM9202, Hitron CODA56, Hitron CODA, Humax HGD310, Motorola B12, Motorola MB8611, Motorola MG8725, Motorola MB8600, Motorola MG8702, Netgear CM2000, Netgear C7800, Netgear CAX30, Netgear CAX80, Netgear CBR750, Netgear CM1000, Netgear CM1000v2, Netgear CM1100, Netgear CM1200, Netgear CM2500, Netgear CM3000, Ubiquiti UCI, ARRIS / Surfboard TG2472, ARRIS / Surfboard SBG7400AC2, ARRIS / Surfboard SBG7600AC2, Motorola MB7621, Motorola MG7700, Netgear C6900, Netgear C7000v2, Netgear C7500, Netgear CBR40, Netgear CM600, Netgear CM700, TP-LINK TC-7650, ARRIS / Surfboard SB6183, ARRIS / Surfboard SBG6900, Asus CM16, Motorola MB7420, Motorola MG7540, Motorola MG7550, Netgear C6230, Netgear C6250, Netgear C6300, Netgear C6300v2, Netgear CM500, TP-LINK TC-7620, TP-LINK CR500, TP-LINK CR700, TP-LINK CR1900, SMC D3CM1604, Zoom 5370, and products that operate in a similar manner ("Accused Cable Modem Products"), as well as the Arris AX013ANC STB, Arris AX013ANM STB, Pace PX022ANC STB, Pace PX022ANM STB, Samsung SX022ANC STB, Samsung SX022ANM STB, and products that operate in a similar manner ("Accused Set Top Products"). Cox provides cable television and internet services ("Accused Services") via the lease, sale, and/or distribution of the Accused Cable Modem Products and/or the Accused Set Top Products. Cox literally and/or under the doctrine of equivalents infringes the claims of the '826 Patent by making, using, selling, offering for sale, and/or importing the Accused Services, Accused Cable Modem Products, and/or the Accused Set Top Products.

As shown below in the chart with exemplary support, the Accused Services infringe at least claims 1 - 4, 6, 8, and 9 of U.S. Patent No. 9,825,826 ("'826 Patent"). The '826 Patent was filed November 23, 2015, issued November 21, 2017, and is entitled "Method and Apparatus for Spectrum Monitoring." The '826 Patent claims priority to U.S. Patent Application Serial No. 14/341,880 filed on Jul. 28, 2014; U.S. Patent Application Serial No. 13/607,916 filed on Sep. 10, 2012; and U.S. Provisional Patent Application No. 61/532,098 filed on Sep. 8, 2011. The '826 Patent is entitled to a priority date of at least as early as February 25, 2011.

The Accused Set Top Products and the Accused Cable Modem Products infringe the claims of the '826 Patent, as described below, either directly under 35 U.S.C. § 271(a), or indirectly under 35 U.S.C. § 271(b)–(c).

### Case 2:23-cv-01049-JWH-KES Document 114-15 Filed 11/13/23 Page 4 of 19 Page ID #:1951

#	U.S. Patent No. 9,825,826	Accused Products and Services
	A method comprising:	The Accused Services are provided by the claimed system by utilizing, for example, the Accused Set Top Products, which include at least one set top box ("STB") located at each subscriber location, including, for example, the Arris AX013ANC STB, Arris AX013ANM STB, Pace PX022ANC STB, Pace PX022ANM STB, Samsung SX022ANC STB, Samsung SX022ANM STB, and products that operate in a similar manner, and/or the Accused Cable Modem Products including, for example, the Technicolor CGM4981, Technicolor CGM4331, Technicolor CGM4141, Technicolor CVA4004, ARRIS / Surfboard TM3402, ARRIS / Surfboard G36, ARRIS / Surfboard G54, ARRIS / Surfboard S33, ARRIS / Surfboard CM8200, ARRIS / Surfboard G34, ARRIS / Surfboard SB8200, ARRIS / Surfboard G34, ARRIS / Surfboard SB8200, ARRIS / Surfboard G34, ARRIS / Surfboard MB8611, Motorola MG8725, Motorola MB8600, Motorola MG8702, Netgear CM2000, Netgear C7800, Netgear CAX30, Netgear CAX80, Netgear CBR750, Netgear CM100002, Netgear CM1000v2, Netgear CM1100, Netgear CM1200, Netgear CM2500, Netgear CM3000, Ubiquiti UCI, ARRIS / Surfboard TG2472, ARRIS / Surfboard SBG7400AC2, ARRIS / Surfboard SBG7600AC2, Motorola MB7621, Motorola MG7700, Netgear C6900, Netgear C7000v2, Netgear C7500, Netgear CBR40, Netgear CM600, Netgear CM700, TP-LINK TC-7650, ARRIS / Surfboard SBG6900, Asus CM16, Motorola MB7420, Motorola MG7540, Motorola MG7550, Netgear C6230, Netgear C6250, Netgear C6300, Netgear C6300v2, Netgear CM500, TP-LINK TC-7620, TP-LINK CR500, TP-LINK CR700, TP-LINK CR1900, SMC D3CM1604, Zoom 5370, and products that operate in a similar manner, located at each subscriber location.  By way of example, the Technicolor CGM4141 cable modem is charted herein. As described below, the Technicolor CGM4141 has a Broadcom BCM3390 SoC. On informed belief, all devices deployed by or enabled by Cox that contain the BCM33843 SoC on informed belief, all devices deployed by or enabled by Cox that contain the BCM33843 SoC on BCM33843 SoC equally describe the operation of the BCM3390 SoC.

### Case 2:23-cv-01049-JWH-KES Document 114-15 Filed 11/13/23 Page 5 of 19 Page ID #:1952

#	U.S. Patent No. 9,825,826	Accused Products and Services
		Therefore, the Technicolor CGM4141 is representative of all Accused Set Top Products and Accused
		Cable Modem Products, including those having BCM3383, BCM3384, BCM33843, or BCM3390
		SoCs.
		Discovery will provide detailed information regarding implementation and identification of the specific components, source code, software and/or other instrumentalities used to implement the claimed method. As additional information is obtained through discovery related to the Accused Services and related instrumentalities, Entropic will supplement these contentions.
1a	performing by one or more	The Accused Set Top Products and the Accused Cable Modem Products include one or more circuits
	circuits of a receiver coupled	of a receiver coupled to a television and data service provider headend via a hybrid fiber coaxial (HFC)
	to a television and data	network, that perform the claimed steps as described below.
	service provider headend via	Specifically, the Technicolor CGM4141 has applicable circuitry and/or software modules constituting
	a hybrid fiber coaxial (HFC)	an analog to digital converter. For example, the Technicolor CGM4141 has a Broadcom BCM3390
	network:	SoC, highlighted in red below. The Technicolor CGM4141 has at least one RF connector, highlighted
		in blue, that couples to a television and data service provider headend via HFC network owned and/or
		operated by Cox.

#	U.S. Patent No. 9,825,826	Accused Products and Services
		to any channel anywhere. Remote diagnostics provides real time, unobtrusive diagnostic and spectrum
		analysis capabilities, without effecting user service on any of the 24 downstream channels."
		(ENTROPIC_COX_002016 at ENTROPIC_COX_002018)
		Discovery will provide detailed information regarding implementation and identification of the
		specific components, source code, software and/or other instrumentalities used to implement the
		claimed method. As additional information is obtained through discovery related to the Accused
		Services and related instrumentalities, Entropic will supplement these contentions.
1h	controlling the transmission	The Accused Set Top Products and the Accused Cable Modem Products control the transmission of
	of network management	network management messages back to said headend based on said measured characteristic of said
	messages back to said	received signal, wherein said measured characteristic is different than said network management
	headend based on said	messages as described below.
	measured characteristic of	
	said received signal, wherein	Specifically, the Technicolor CGM4141, using its applicable circuity and/or software modules, is
	said measured characteristic	operable to control the transmission of network management messages based on the measured
	is different than said network	characteristics. The Technicolor CGM4141 sends the network management messages to servers and/or
	management messages.	systems provided by and/or operated by Cox. On informed belief, the Technicolor CGM4141 provides
		information to a PNM system operated by Cox. This allows the received signals to be analyzed at a
		customer's premises (e.g., where the Technicolor CGM4141 is located) and the received signals can
		be remotely analyzed without driving to the customer's premises or accessing the in-home wiring.
		"Full-Band Capture digital tuning technology and remote diagnostics: Integrated on-chip technology
		directly samples and digitizes the entire 1GHz downstream spectrum of a cable plant, providing access
		to any channel anywhere. Remote diagnostics provides real time, unobtrusive diagnostic and spectrum
		analysis capabilities, without effecting user service on any of the 24 downstream channels."
		(ENTROPIC_COX_002016 at ENTROPIC_COX_002018)
		"Wideband spectrum analysis has been demonstrated widely in the field as a very useful PNM tool
		which provides for a spectrum analyzer capability in CMs at as many locations as possible in the plant.

### Case 2:23-cv-01049-JWH-KES Document 114-15 Filed 11/13/23 Page 13 of 19 Page ID #:1960

#	U.S. Patent No. 9,825,826	Accused Products and Services
		Full-band capture in silicon permits the display to encompass the entire downstream spectrum. Figure 4 shows a spectrum of the received downstream signal at a CM. In this case, we observe fluctuations across the band in carrier amplitude, including a group of bonded carriers around 630 MHz with higher power than their neighbors. We see vacancies in the spectrum, and locations where unmodulated analog video carriers are used as pilots. The overall slope of the spectrum is generally flat; no major up-slope or downslope is seen and no appreciable ripple. We see a notch around 720 MHz indicating a power "suckout" that would cause a service outage on those channels. These determinations may be automated by software algorithms to analyze the spectral information. Clearly this plant requires maintenance, even if no call has yet been received from a customer."  (ENTROPIC_COX_002919 at ENTROPIC_COX_002925)
		Discovery will provide detailed information regarding implementation and identification of the specific components, source code, software and/or other instrumentalities used to implement the claimed method. As additional information is obtained through discovery related to the Accused Services and related instrumentalities, Entropic will supplement these contentions.
2	2. The method of claim 1, wherein said network management messages indicate whether a parameter is outside of acceptable bounds.	The network management messages indicate whether a parameter is outside of acceptable bounds as described below.  The Technicolor CGM4141, using its applicable circuitry and/or software modules, performs diagnostics and spectrum analysis of the received signal. The diagnostics and spectrum analysis includes measuring characteristics indicating whether a parameter is outside of acceptable bounds. The network management message generated based on this measured characteristic therefore indicates whether a parameter is outside of acceptable bounds.
		"Full-Band Capture digital tuning technology and remote diagnostics: Integrated on-chip technology directly samples and digitizes the entire 1GHz downstream spectrum of a cable plant, providing access

4	4. The method of claim 2,	Said parameter is a transmit power of said received signal as described below.
	wherein said parameter is a	
	transmit power of said received signal.	The Technicolor CGM4141, using its applicable circuitry and/or software modules, performs diagnostics and spectrum analysis of the received signal. The diagnostics and spectrum analysis includes measuring characteristics indicating whether a parameter is outside of acceptable bounds. The network management message generated based on this measured characteristic therefore indicates whether a parameter is outside of acceptable bounds. On informed belief, this includes a transmit power of the received signal.
		"Full-Band Capture digital tuning technology and remote diagnostics: Integrated on-chip technology directly samples and digitizes the entire 1GHz downstream spectrum of a cable plant, providing access to any channel anywhere. Remote diagnostics provides real time, unobtrusive diagnostic and spectrum analysis capabilities, without effecting user service on any of the 24 downstream channels." (ENTROPIC_COX_002016 at ENTROPIC_COX_002018)
		"Wideband spectrum analysis has been demonstrated widely in the field as a very useful PNM tool which provides for a spectrum analyzer capability in CMs at as many locations as possible in the plant. Full-band capture in silicon permits the display to encompass the entire downstream spectrum. Figure 4 shows a spectrum of the received downstream signal at a CM. In this case, we observe fluctuations across the band in carrier amplitude, including a group of bonded carriers around 630 MHz with higher power than their neighbors. We see vacancies in the spectrum, and locations where unmodulated analog video carriers are used as pilots. The overall slope of the spectrum is generally flat; no major up-slope or downslope is seen and no appreciable ripple. We see a notch around 720 MHz indicating a power "suckout" that would cause a service outage on those channels. These determinations may be automated by software algorithms to analyze the spectral information. Clearly this plant requires maintenance, even if no call has yet been received from a customer." #	U.S. Patent No. 9,825,826	Accused Products and Services
		Discovery will provide detailed information regarding implementation and identification of the
		specific components, source code, software and/or other instrumentalities used to implement the
		claimed method. As additional information is obtained through discovery related to the Accused
		Services and related instrumentalities, Entropic will supplement these contentions.
6	6. The method of claim 1,	Said characteristic is signal power vs. frequency as described below.
	wherein said characteristic is	
	signal power vs. frequency.	The Technicolor CGM4141, using its applicable circuitry and/or software modules, performs
		diagnostics and spectrum analysis of the received signal. On informed belief, the diagnostics and
		spectrum analysis includes measuring characteristics including signal power vs. frequency.
